

KATOUN® GOLD

MAPP: 20173

A non-selective sustainable plant based contact herbicide for total weed control on amenity vegetation, natural surfaces not intended to bear vegetation, and permeable surfaces overlying soil

- Fast acting on young growing weeds
- Control of annual & perennial weeds, moss & algae
- Particularly effective on Horse Tail
- Fully bio-degradable in plants & in soil

Katoun Gold in action

Before

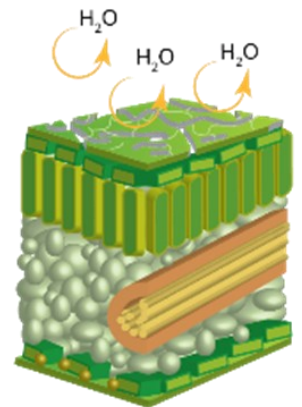

After

Katoun Gold Mode of Action

The pelargonic acid penetrates the waxy leaf cuticle and destroys the cell membranes. This exposes the cell contents to the elements resulting in rapid dehydration and plant death

For best results apply in:

- Temperature greater Than 15 Celsius
- Bright sunshine and no Rain forecast for 12 Hours

Formulation	An emulsifiable concentrate total contact herbicide containing 500g/L pelargonic acid				
Crops	Amenity vegetation, natural surfaces not intended to bear vegetation, permeable surfaces overlying soil				
Weed Targets	Young actively growing grass and broad leaf weed species up to 10cm, mosses and algae				
Applications	4 applications per year. Repeat applications must be a minimum of 14 days apart				
Dose Rate	22.5L/ha	Water Volume	225L/ha	Rain Fastness	2 Hours
